Guidelines~~

Enteral feeding formulae are about 70-80% water and the remainder of the volume consists of solids that are not used as fluid by the body. For accurate calculation of fluid input (eg to meet requirements, or for fluid restrictions), it is important to use the formula's actual water content, not the total volume of formula being given.

Contraindications for Enteral Feeding If the patient's gastrointestinal tract is compromised (e.g. gut failure or intestinal obstruction) or inaccessible via an enteral tube, they may require parenteral nutrition instead. This involves nutrients being inserted directly into the bloodstream via a central venous catheter (DAA 2018).
