Transformations are described as the movement of a line, point, or object within a coordinate plane. The four main types of Transformations are translations, reflections, rotations, and dilations. Generally, Transformations are best solved using a grid or coordinate plane because they provide accurate referencing when moving an object, line, or point.

The International Symposium on History of Machines and Mechanisms is a new initiative to promote explicitly researches and publications in the field of the History of TMM (Theory of Machines and Mechanisms). It was held at the University of Cassino, Italy, from 11 to 13 May 2000. The Symposium was devoted mainly to the technical aspects of historical developments and therefore it has been addressed mainly to the IFToMM Community. In fact, most the authors of the contributed papers are experts in TMM and related topics. This has been, indeed, a challenge: convincing technical experts to go further in-depth into the background of their topics of expertise. We have received a very positive response, as can be seen by the fact that these Proceedings contain contributions by authors from all around the world. We received about 50 papers, and after review about 40 papers were accepted for both presentation and publishing in the Proceedings. This means also that the History of TMM is of interest everywhere and, indeed, an in-depth knowledge of the past can be of great help in working on the present and in shaping the future with new ideas. I believe that a reader will take advantage of the papers in these Proceedings with further satisfaction and motivation for her or his work (historical or not). These papers cover the wide field of the History of Mechanical Engineering and particularly the History of TMM.

Nautilus Award Winner In this empowering work, the bestselling author of *The Hero Within* and *Awakening the Heroes Within* speaks to the heroine in every woman, offering potent strategies to forge lives of greater happiness and fulfillment—through activating the archetypes inherent in the ancient Greek myth of Demeter and Persephone. Our era of professional and familial pressures, constant connection, and a renewed debate on “having it all” presents unprecedented challenges to contemporary women. In *Persephone Rising*, celebrated scholar of depth psychology and archetypes Carol S. Pearson brings a fresh vision for meeting those challenges and rising above them, as only she can. Drawing on her profound understanding of myth’s enduring power to catalyze transformations, Pearson guides readers on a journey of self-discovery, teaching us how to activate and apply the archetypes of Demeter and Persephone, as well as Zeus and Dionysus, in our own lives—empowering readers to see the unexpected choices and opportunities available to us all. Illuminating ancient wisdom for a modern audience, *Persephone Rising* offers meaningful and effective strategies to answer the call to heroism in our own lives: to locate and harness the unique potential within each of ourselves, and ultimately to develop our own innate heroic gifts. Just as Demeter and Persephone discovered, in the midst of great difficulty, their own powers, gifts, and abilities for creating a better path not only for themselves, but the world, *Persephone Rising* teaches that each one of us has more options than choosing whether to lean in or out—we have the power to change ourselves, and thus our world.

This book integrates art production, art history, art criticism, and aesthetics into 56 lessons for middle school classes. There are also 17 reproducible pages on art concepts to use as study guides. (Adapted from back cover).

Transformations in Stories and Arguments explores essential questions, such as “How does the development of a character build the reader’s understanding? How do the actions of others change the world? How do words and images impact our thinking?” This unit, developed by Vanderbilt University’s Programs for Talented Youth, is aligned to the Common Core State Standards and features accelerated content, creative products, differentiated tasks, engaging activities, and the use of in-depth analysis models to develop sophisticated skills in the language arts. Through the lens of transformation, students will examine narrative and persuasive elements essential to the analysis of short stories, advertisements, visual art, scientific argumentation, and their own writing. Students will discover transformations in themselves and their written work as they craft and revise narrative and persuasive pieces, realizing their own voice in the process. Ideal for gifted classrooms or gifted pull-out groups, the unit features stories by Dan Santat, Fiona Robertson, Jannell Cannon, Christopher Myers, Maurice Sendak, Daniel Manus Pinkwater, Jane Yolen, and Patricia Polacco; poetry by Carl Sandburg; sculptures by Arturo Di Modica and Kristen Visbal; a viewing of Pixar’s short film *Lou* and a variety of commercials; and engaging short nonfiction readings. Winner of the 2015 NAGC Curriculum Studies Award Grades 2-4

Engaging Resistance: How Ordinary People Successfully Champion Change offers an empirically based explanation that expands our understanding about the nature of resistance to organizational change and the effects of champion behavior. The text presents a new model describing how resistance occurs over time and details what change proponents can do throughout three engagement periods to effectively work with hesitant colleagues. The book’s findings are illuminated by examples of six different resistance cases, embedded in the transformation sagas of two real-world organizations. A fundamental premise of this work is that resistance should not be something to avoid or squash as people work to change their organizations. In fact, resistance can be viewed as a natural, healthy part of an organic process. When engaged properly, resisters can help to improve change efforts and strengthen an organization’s overall transformation.
