Informed by these splendid human attributes, we choose the approach and the tools that will advance the objectives we seek to attain, in this case, the imperative to improve the human condition.

Collection of philosophical papers

"An excellent interdisciplinary collage . . . of considerable interest to philosophers, psychologists, computer scientists (of a theoretical stripe), sociologists, and others. . . . Rethinking our relationship to animals is very relevant, I believe, to thinking clearly about our current relationships to current (and future) machines."--Keith Gunderson, University of Minnesota

From the bestselling author of *Waking Up* and *The End of Faith*, an adaptation of his wildly popular, often controversial podcast "Civilization rests on a series of successful conversations." —Sam Harris Sam Harris—neuroscientist, philosopher, and bestselling author—has been exploring some of the most important questions about the human mind, society, and current events on his podcast, *Making Sense*. With over one million downloads per episode, these discussions have clearly hit a nerve, frequently walking a tightrope where either host or guest—and sometimes both—lose their footing, but always in search of a greater understanding of the world in which we live. For Harris, honest conversation, no matter how difficult or controversial, represents the only path to moral and intellectual progress. This book includes a dozen of the best conversations from *Making Sense*, including talks with Daniel Kahneman, Timothy Snyder, Nick Bostrom, and Glen Loury, on topics that range from the nature of consciousness and free will, to politics and extremism, to living ethically. Together they shine a light on what it means to "make sense" in the modern world.

What can--and what can't--philosophy do? What are its ethical risks--and its possible rewards? How does it differ from science? In *Philosophy as a Humanistic Discipline*, Bernard Williams addresses these questions and presents a striking vision of philosophy as fundamentally different from science in its aims and methods even though there is still in philosophy "something that counts as getting it right." Written with his distinctive combination of rigor, imagination, depth, and humanism, the book amply demonstrates why Williams was one of the greatest philosophers of the twentieth century. Spanning his career from his first publication to one of his last lectures, the book's previously unpublished or uncollected essays address metaphysics, epistemology, and ethics, as well as the scope and limits of philosophy itself. The essays are unified by Williams's constant concern that philosophy maintain contact with the human problems that animate it in the first place. As the book's editor, A. W. Moore, writes in his introduction, the title essay is "a kind of manifesto for Williams's conception of his own life's work." It is where he most directly asks "what philosophy can and cannot contribute to the project of making sense of things"--answering that what philosophy can best help make sense of is "being human." *Philosophy as a Humanistic Discipline* is one of three posthumous books by Williams to be published by Princeton University Press. In *The Beginning Was the Deed: Realism and Moralism in Political Argument* was published in the fall of 2005. *The Sense of the Past: Essays in the History of Philosophy* is being published shortly after the present volume.

Bernard Williams is one of the most influential figures in ethical theory, where he has set a considerable part of the current agenda. In this collection a distinguished international team of philosophers who have been stimulated by Williams's work give responses to it. The topics covered include equality; consistency; comparisons between science and ethics; integrity; moral reasons; the moral system; and moral knowledge. Williams himself provides a substantial reply, which shows both the directions of his own thought and also his present view of earlier work of his which has been extensively discussed for twenty years (such as that on utilitarianism). This volume will be indispensable reading for all those interested in ethical theory.

A Financial Times "Business Book of the Month" Based on his work at some of the world's largest companies, including Ford, Adidas, and Chanel, Christian Madsbjerg's *Sensemaking* is a provocative stand against the tyranny of big data and scientism, and an urgent, overdue defense of human

intelligence. Humans have become subservient to algorithms. Every day brings a new Moneyball fix--a math whiz who will crack open an industry with clean fact-based analysis rather than human intuition and experience. As a result, we have stopped thinking. Machines do it for us. Christian Madsbjerg argues that our fixation with data often masks stunning deficiencies, and the risks for humankind are enormous. Blind devotion to number crunching imperils our businesses, our educations, our governments, and our life savings. Too many companies have lost touch with the humanity of their customers, while marginalizing workers with liberal arts-based skills. Contrary to popular thinking, Madsbjerg shows how many of today's biggest success stories stem not from "quant" thinking but from deep, nuanced engagement with culture, language, and history. He calls his method sensemaking. In this landmark book, Madsbjerg lays out five principles for how business leaders, entrepreneurs, and individuals can use it to solve their thorniest problems. He profiles companies using sensemaking to connect with new customers, and takes readers inside the work process of sensemaking "connoisseurs" like investor George Soros, architect Bjarke Ingels, and others. Both practical and philosophical, Sensemaking is a powerful rejoinder to corporate groupthink and an indispensable resource for leaders and innovators who want to stand out from the pack.

Since the discovery of the structure of DNA and the birth of the genetic age, a powerful vocabulary has emerged to express science's growing command over the matter of life. Armed with knowledge of the code that governs all living things, biology and biotechnology are poised to edit, even rewrite, the texts of life to correct nature's mistakes. Yet, how far should the capacity to manipulate what life is at the molecular level authorize science to define what life is for? This book looks at flash points in law, politics, ethics, and culture to argue that science's promises of perfectibility have gone too far. Science may have editorial control over the material elements of life, but it does not supersede the languages of sense-making that have helped define human values across millennia: the meanings of autonomy, integrity, and privacy; the bonds of kinship, family, and society; and the place of humans in nature.
