Winner of the 2012 HIMSS Book of the Year Award! Co-published by HIMSS, the Scottsdale Institute, AMIA, AMDIS and SHM, this second edition of the authoritative guide to CDS implementation has been substantially enhanced with expanded and updated guidance on using CDS interventions to improve care delivery and outcomes. This edition has been reorganized into parts that help readers set up (or refine) a successful CDS program in a hospital, health system or physician practice; and configure and launch specific CDS interventions. Two detailed case studies illustrate how a "real-life" CDS program and specific CDS interventions might evolve in a hypothetical community hospital and small physician practice. This updated edition includes enhanced worksheets--with sample data--that help readers to document and use information needed for their CDS program and interventions. Sections in each chapter present considerations for health IT software suppliers to effectively support their CDS implementer clients.

The overall objective of this book is to provide standards for the knowledge, skills, and attitudes expected of all hospitalists and to provide a framework for ongoing professional and curriculum development for learners at all levels. The framework is intended for use by hospital medicine program directors, directors of medical student clerkships, residency programs, fellowships, and continuing medical education, as well as other educators involved in curriculum development. The competencies do not focus on specific content, but rather general learning objectives within the skills, knowledge, and attitudes related to each topic. Attaining competency in the areas defined in these chapters is expected to require post-residency training. This training is most likely to be obtained through a combination of work experience, local mentorship, and engagement in specific educational programs or fellowship. Hospitalists, directors, and educators can create specific instructional activities and methods chosen to reflect the characteristics of the intended learners and context of the practice environment. Within each section, individual chapters on focused topics provide competencies in three domains of educational outcomes: the Cognitive Domain (Knowledge), the Psychomotor Domain (Skills), and the Affective Domain (Attitudes). To reflect the emphasis of hospital medicine practice on improving healthcare systems, a fourth section entitled Systems Organization and Improvement is also included. An attempt has been made to make the objectives timeless, allowing for creation of curriculum that can be nimble and reactive to new discoveries. Although the entire document can be a resource for comprehensive program development, each chapter is intended to stand-alone and thus support curriculum development specific to the needs of individual programs.
